

AI/ML Engineer – Job Description (Based on Your Resume)

Role Overview

We are seeking an AI/ML Engineer with strong expertise in **Large Language Models (LLMs)**, **NLP**, **data engineering**, **backend development**, and end-to-end project execution. The ideal candidate has hands-on experience building AI applications, developing scalable pipelines, optimizing databases, and deploying production-ready systems using modern tools and cloud services.

The engineer will work on designing intelligent systems, building advanced analytics solutions, and implementing AI-driven applications that enhance user experience, automate workflows, and improve business decision-making.

Key Responsibilities

AI & Machine Learning Development

- Build and deploy end-to-end **LLM-powered applications** including chatbot systems, retrieval-augmented generation (RAG), and custom AI pipelines.
- Develop NLP solutions using **Hugging Face**, **FastText**, **BERT**, and **LLaMA models**.
- Perform prompt engineering to optimize AI behavior, improving aspects such as originality, emotional depth, memory, and narrative performance.
- Implement **model evaluation**, ranking systems, and scoring mechanisms for candidate/resume screening.
