Projects

Virtual Interactive Builder of Experiences [A Storytelling Chatbot] (Dec–Jan 2025) [github](#)

- Developed a robust system by integrating MongoDB, Pinecone, and the Llama 3.3 70B model to manage large datasets and generate flexible narratives. Leveraged prompt engineering to improve six dimensions of storytelling: originality, descriptive setting, emotional depth, character dynamics, memory, and narrative pace, resulting in a 25% increase in engagement.
- Reduced the overall story generation time from 40 seconds to 10 seconds, significantly improving system responses.
- Technologies used: Python, FastAPI, MongoDB, Pinecone, LLaMA, ColBERT, React, TypeScript, Tailwind CSS, groq cloud, AWS and Git.

Hospital Information Management System (HIMS) – SQL Server Project (Jan–Feb 2025) [github](#)

- Designed and developed a Hospital Information Management System in SQL Server to manage patient records, appointments, billing, and inventory. Optimized SQL queries, stored procedures, and triggers to reduce data retrieval times by up to 40%.
- Integrated multiple modules for patient registration, appointment scheduling, and medical record management, streamlining hospital workflows and reducing manual errors.
- ANSI SQL, Microsoft SQL Server

AI Resume Screening & Candidate Ranking System Using FastText (Feb–Mar 2025) [github](#) [web](#)

- Leveraged advanced LLM analysis via the Groq API (llama-3.1-8b-instant) to extract and evaluate skills, projects, and certifications from PDF resumes, generating normalized scores (0–10) for precise candidate ranking.
- Developed a robust data ingestion pipeline with PyPDF2 and an interactive Streamlit UI that reduced manual screening time by up to 30% and improved candidate selection, addressing the issue of nearly 50% of resumes lacking critical skill matches.
- Technologies: Python, Streamlit, PyPDF2, Pandas, NumPy, Groq API, LLM, HTML/CSS (for report generation)

Data Analytics Simulations – Quantum & Commonwealth Bank Job simulation (Mar–Apr 2025)

- Built data engineering pipelines to clean, aggregate, and analyze datasets for business insights.
 - Conducted customer analytics and transaction data modeling for commercial decision making.
 - Developed a data anonymization process to ensure compliance with privacy regulations.
 - Identified benchmark stores for uplift testing, optimizing trial store layouts, and improving sales strategies.
- Technologies used: Python, R, Pandas, NumPy, Matplotlib, Seaborn, A/B Testing, Uplift Modeling, ETL Pipelines, Excel, APIs, GitHub

@ l r

Achievements and Certifications

Presented research at the 2nd International Conference on Multidisciplinary Research and Sustainable Development.	Mar 2025
Took part in the Asia AI Odyssey Challenge, gaining hands-on AI experience – Microsoft.	Jun 2024
Develop Generative AI solutions with Azure OpenAI Service @ Microsoft	Apr 2024
Project Management Fundamentals - IBM	Jul 2024
Develop solutions with Azure AI Document Intelligence - Microsoft	Apr 2024

Education

[certificates](#)

KG Reddy College Of Engineering and Technology <i>B.Tech in Computer Science (Data Science), 78%</i>	<i>Nov 2021 â May 2025</i>
--	----------------------------

Skills

Programming & Scripting: Python (Proficient), SQL (Proficient), Java

Databases & Cloud: MySQL, MongoDB (Intermediate), AWS S3

AI/ML Tools: Pandas, NumPy, Scikit-learn, Matplotlib, Seaborn, FastText, Tensorflow

NLP & GenAI: Hugging Face, LLM, RAG, BERT,NLP, Prompt Engineering, Langchain

Visualization & Reporting: Tableau, Power BI, MS Office

Version Control & Deployment: Git, GitHub, Streamlit, Docker, CI/CD
